

INDY MUSIC TECHNOLOGIES RELEASES ANDROID APP FROM THE GOOGLE PLAY STORE

AURORA, OR; Feb. 28, 2017 – Indy Music Technologies announced today the release of its first app extension to the Indy Music Manager: an Android app available from the Google Play store.

The Indy Music Manager is a specialized download application to deliver purchased music from web sites running e-commerce stores using Indy Music Sales offerings. The Indy Music Manager Android app handles direct download to Android mobile devices following purchase, and does away with the need for fans to manage individual music files or deal with zip files.

It is a key component of the Indy Music Sales hosted e-commerce offering for independent musicians. Indy Music Sales is a specialized e-commerce application that is optimized for the sale of music in its varied forms (CDs, LP, and MP3 download files, as well as the sale of the full range of merchandise.

Indy Music Sales hosted software is offered as Silver, Gold and Platinum—scalable from individual indie musicians up to the robust needs of independent labels.

The new Android app will shortly be followed by an iOS app from the Apple App Store that will run on iPhones and iPads.

Indy Music Sales Silver, Gold and Platinum versions were released in late 2016, with a mix of indie musicians and a large digital reseller.
