

INDY MUSIC TECHNOLOGIES RELEASES APPLE iOS APP FROM THE APPLE APP STORE

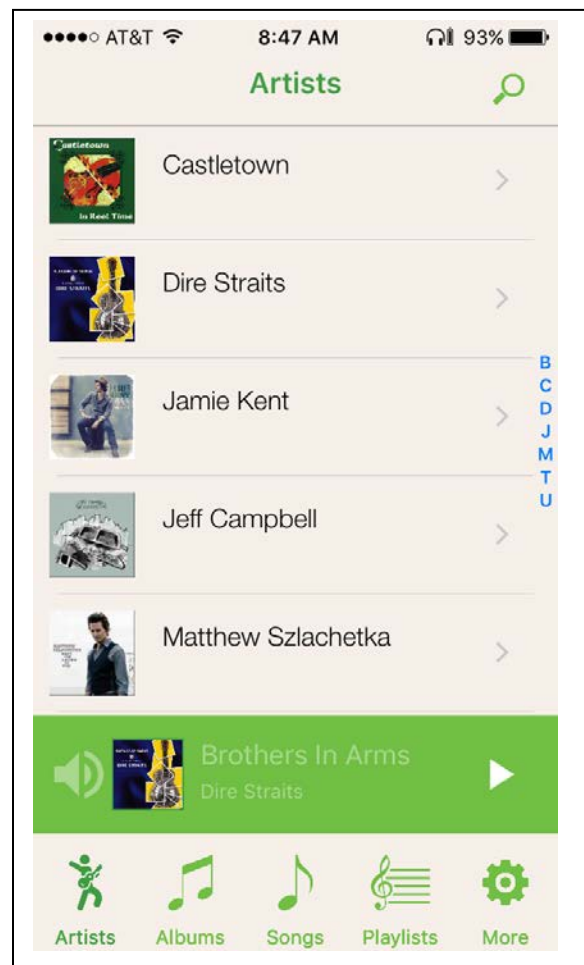

AURORA, OR; June 2, 2017 – Indy Music Technologies announced today the release of its integrated download manager and music player app available from the Apple App store.

The Indy Music app provides a platform for music fans to access and play any of their downloads outside of iTunes. It also features a Download Manager to help easily deliver purchased music from their favorite artists web sites right to their iOS mobile devices. It also does away with the need for fans to manage individual file links or deal with zip files, currently the only solution when purchasing from artist’s websites.

Because the download manager operates in the background and is coupled with a high-quality stand-alone music file player, it requires no interaction with iTunes.

This allows fans to easily make purchases from musician web stores using Indy Music Sales software right to their mobile devices, and then create and manage a music library outside of iTunes and Apple Music. It also includes a wi-fi transfer utility to directly move music files from computers to iOS mobile devices. iPhone and iPad compliant.

Indy Music Sales is a specialized e-commerce application that is optimized for the sale of music in its varied forms (CDs, LP, and MP3 download files), as well as the sale of the full range of merchandise. IMS hosted software is offered as Silver, Gold and Platinum—scalable from individual indie musicians up to the robust needs of independent labels.
